

HOW TO CLEAN A GAS STOVE

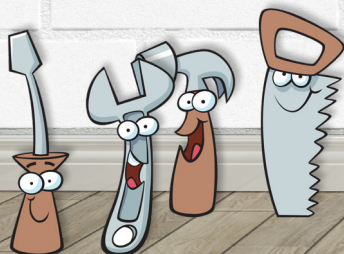

For this maintenance project, you will need:

- ✓ Vinegar
- ✓ A spray bottle
- ✓ A dish sponge
- ✓ Paper towel
- ✓ Dish soap

1. Fill a large bucket or sink with warm, soapy water.
2. Remove the grates and burners, placing them in the water to soak. Leave these for half an hour.
3. You may need to rotate the grates at the 15 minute mark, to allow full coverage.
4. Whilst these are soaking, fill a spray bottle with a white vinegar, and use this to carefully spray down the stovetop.
5. Allow this to sit for 20 minutes before using dish soap and a scourer to remove grease and debris.
6. Wipe clean with paper towel.
7. Repeat if needed.
8. Finally, remove the stove components, scrubbing off any loose material with a sponge, before allowing to dry completely before reassembling.

Scrub in the direction of the stainless steel grain, as this will ensure you don't end up with swirl marks.

HOME IN PLACE TENANTS PLEASE REFER TO YOUR RESIDENTIAL TENANCY AGREEMENT TO SEE IF THIS TYPE OF MAINTENANCE IS YOUR RESPONSIBILITY.
